NOTES:

1. Numbers include all assets held for the complete reporting year.
2. This indicator aligns with Oxford's water target – a 10% reduction in water consumption on a per square foot basis, by 2019 (relative to a 2014 base year). The target is based on a weighted average across office, retail and residential properties.
3. Number of buildings and floor area of buildings refer to buildings with actual, complete year data.
4. This indicator aligns with Oxford's water target – a 10% reduction in water consumption on a per square foot basis, by 2019 (relative to a 2014 base year). The target is based on a weighted average across office, retail and residential properties.
5. Changes in data systems and increased knowledge of systems reflected in a new space-type of 'mixed use' starting in 2015, removing assets previously categorized and counted within office and retail categories.
6. Equipment upgrades (water efficient fixtures), enhanced management practices (landscaping) and portfolio shifts (newly developed assets coming online) resulted in downward pressure on consumption. Portfolio shifts (some acquisitions) have resulted in upward pressure on consumption.
7. Most Quebec properties excluded from calculation due to lack of data availability.
8. Residential water data for 2014 has been restated due to updated actual water consumption data.
